

VM96FZK & VM96FSR Technical Bulletin

If part # VM96FZK-B looks good it will work. This part is used only to apply force to the force sense resistor (Part # VM96FSR). Part # VM96FSR provides the variable resistance as variable pressure is applied while pushing the focus or zoom buttons.

The force sense resistor part # VM96FSR is a very common failure part. This part is used in the control of the pan, tilt, zoom, and focus functions.
